G protein coupled receptor protein SLT, DNA encoding it and antibodies recognizing it, useful for treatment and diagnosis of e.g. neurological diseases

Claim 1; Fig 1; 108pp; Japanese.

This invention relates to a G-protein coupled receptor protein, SLT of human origin. The nucleotide and protein sequences are given in the specification. The invention includes expression vector containing SLT encoding polynuclectide sequences, host cells transformed with the vectors, and methods for preparing SLT through the culturing of the transformants. Also included are anti-SLT antibodies, SLT ligands and methods for their identification. SLT exhibits antiallergic, antidiabetic, nootropic, neuroprotective,

antiinflammatory, neuroleptic, and hypotensive activity. The G protein coupled receptor protein SLT, the DNA encoding it and its antibodies can be used for the diagnosis and treatment of diseases with which SLT is associated, such as disorders of SLT expression. These include nervous system disorders, hormonal disorders, inflammatory diseases, cardiovascular diseases, and liver/gall bladder/pancreas diseases (such as Alzheimer's disease, schlizophrenia, allergies, rheumatism, sodium intolerance, diabetes and hypertension). The present sequence represents

Sequences AAU25554-AAU25616 represent human G-protein coupled receptor (GPCR) polypeptides of the invention. The proteins and their associated DNA sequences can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity By screening a human subject for the presence of mutations in GPCR activity GPCR-related disorder or a genetic predisposition can be diagnosed. The esquences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as Huntington's disease, Parkinson's disease and Tourette's syndrome, metabolic disorders such as obesity, anorexia and type 2 diabetes, cardiomyopathy and atherosclerosis, viral infections caused by HIV and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VESCAFDLISPDDVLWYTLYLTTTFFFPLFLILVCYILILCYTWEMYQQNKDARCCNPS

AAB68428 standard; protein; 340 AA

RESULT 3 AAB68428 ID AAB6

ო

```
The invention relates to a novel protein comprising a fully defined 340 amino acid sequence, or the sequence contealing one or more amino acid substitutions, deletions or insertions. The protein shows melanin concentrating hormone (MCH) receptor activity. It is a G protein coupled receptor that binds to MCH. The protein is used to find agents to treat obesity, cachexia, anorexia nervosa and hyperphagia. The present sequence is a human MCH receptor polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SAIMTVMSVDRYFALVQPFRLTRWRTRYXTIRINLGLWAASFILALPVWVYSKVIKFKDG 180

HG67 is a melanin concentrating hormone receptor. Modulators of HG67 can be used to treat a patient, particularly to reduce weight, particularly in obesity, or to treat stress. These modulators can also be used to treat cancer, reduce pain, treat sexual dysfunction or to produce weight gain. Bringing about weight loss can be used to reduce the likelihood of hypertension, diabetes, dyslipidemia, cardiovascular disease, gall stones, osteoarthritis or certain forms of cancers. Increasing weight can be useful in the treatment of anorexia, AlDS, wasting, cachexia and frail elderly patients, or those undergoing chemotherapy or radiation therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is AXOR21, a G-protein coupled receptor. AXOR21 polynucleotides and polypeptides are useful for treating and diagnosing conditions such as pain, cancers, diabetes, obesity, anorexia, bulimia, asthinson's disease, acute heart failure, hypotension, winnary retention, osteoporosis, angina pectoris, myoeardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomitting, psychotic and neurological disorders including anxiety, schizophrenia, manic depression, depression, delirium, dementia and severe mental retardation, and dyskinesis such as thurington's disease or dilles de la Tourette's syndrome. AXOR21 polynucleotides and polypeptides are also useful for screening and structure based designing of antagonists, agomists and inhibitors of AXOR1. AXOR21 polynucleotides are useful for chromosome localisation studies, as diagnostic reagents for detecting mutations in associated genes, and as valuable tools for tissue expression studies. AXOR21 polynucleotides are useful as vaccines

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VPKQRVMKLIKMVLVLVVVFILSAAPYHVIQLVNLQMEQPTLAFYVGYYLSICLSYASSS 300
                                                                                                                                                                                              The sequence represents a human G-protein coupled receptor (GPCR), hRUP27. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vito and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RSRKKTVPDIYICNLAVADLVHIVGMPFLIHQWARGGEWVFGGPLCTIITSLDTCNQFAC 120

The invention describes a method of screening for compounds or their salts that can change affinity of melanin-concentrating hormone (MCH) with its G protein-coupled orphan receptor protein, SLT. The screened MCH receptor agonists are useful as appetite-stimulating agents and its antagonist for preventing or treating obesity e.g. malignant mastocystosis, exceptous obesity and hyperinsulinar obesity, and also for treating sexual function disorders, overpowering intermittent pains, still borns, uterus rupture, premature birth and Prader Willi syndrome. This is the amino acid sequence of the G protein-coupled orphan receptor
                                                                                                                                                                                                                                   obesity,
                                                                                                                                                                                                     Screening for compounds or salts which alter affinity of melanin-
concentrating hormone with its receptor to provide agonists as appetite-
stimulating agents and its antagonist for preventing or treating obesity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SAIMTVMSVDRYFALVQPFRLTRWRTRYKTIRINLGLWAASFILALPVWVYSKVIKFKDG

                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a G-protein coupled receptor polypeptide (GPCR), termed TGR, and its associated nucleic acid. The sequences of the invention are useful for identifying a compound that modulates signal transduction and for identifying a mammal having a TGR-associated disorder. The proteins and nucleic acids are useful in diagnosis and treatment of diseases or conditions such as renal failure, nephritis, hypothyroidism, hypothoraism, retinitis pigmentosa, growth disorders, diabetes insipidus, hyperprolactinaemia and disturbances of thirst, sleep, temperature regulation, appetite, blood pressure or any other syndrome or disease associated with the hypothalamus. The sequences can be used in regulation of circadian rhythms, for use as genetic markers for the identification of mutations associated with diseases resulting from GPCR inactivation in particular cell types and for identification of circadian This sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ō

The invention relates to a melanin concentrating hormone type I receptor (MCHIR) deficient mouse whose genome comprises an alteration in one or both MCHIR alleles, where the alteration substantially reduces expression of a functional MCHIR. The invention also relates to a method of measuring the affect of a compound on a MCHIR deficient mouse and measuring one or more phenotypes associated with MCHIR activity e.g. hyperphagic activity, body weight, locomotor activity, the methods and composition of the present invention are useful for screening of compounds that are further used as a research tool and for treating weight loss or weight gain, reducing pain, stress, anxiety, and treating weight loss or weight gain, reducing pain, stress, anxiety, and treating cancer, sexual dysfunction, diabetes, locomotor deficits, fatigue or sleep disorders. The present sequence is human melanin concentrating hormone type 2 receptor (MCH2R) used in a method of the
                                                                                                                                                                                                                                                                                                                               MCHIR deficient mouse with an alteration in one or both alleles, useful for screening of compounds as a research tool and for achieving useful effects for locomotor activity, stress, anxiety, fatigue, circadian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RSRKKTVPDIYICNLAVADLVHIVGMPFLIHQMARGGEWVFGGPLCTIITSLDTCNQFAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel melanin-concentrating hormone type. 2 receptor (MCH-2R) proteins and polymucleotides encoding such proteins. ACH-2R is a G-protein coupled receptor that responds to MCH and it distinct from MCH-1R. Sequences of the invention are useful in measuring and monitoring body weight. The present sequence is human MCH-2R protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to truncated melanin-concentrating hormone (MCH) analogue peptide active at melanin-concentrating hormone-2 receptor (MCH-2R), or its labelled derivative or salt, useful for increasing weight or appetite in a subject. The peptide is useful for screening for a compound able to bind MCH-2R. It is useful for increasing weight or appetite in a subject having an MCH-2R. It is useful for measuring the ability of a compound to decrease weight or appetite in a subject having MCH-2R. It is useful for measuring the ability of a subject having word and word appetite in a subject having MCH-2R. It is useful to screen for MCH agonists, to explore differences between MCH-1R and MCH-2R and between the presence of MCH-1R and MCH-2R. The present sequence is human MCH-2R protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

Introduction relates to those foundament metalling control for the main frequents of main frequence of main frequence is made massuring the change in weight for treating disorders accompanied by medical main main frequents of massuring main frequents of main frequence of main frequence of the main main melanin-concentrating hormone (hMCH) type 2 receptor (MCH-2R) against which the peptides of the invention are specifically not targeted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 RSRKKTVPDIYICNLAVADLVHIVGMPFLIHQWARGGEWVFGGPLCTIITSLDTCNQFAC 120
                                                                                                                                                                                                                                                                                                                                                                   Human, melanin-concentrating hormone, hMCH; MCH type 1 receptor; MCH-1R; MCH-1R agonist, anti-HIV; anabolic; immunomoulator; increasing weight; increasing appetite, weight loss disorder; anorexia; AIDS; wasting; cachexia; frail elderly disease; food intake; hypothalamus neuronal cell body; lateral hypothalamus perikaryon; zona inertia; orexigenic; MCH type 2 receptor; MCH-2R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New optionally substituted truncated human melanin-concentrating hormone (hWCH) peptides are hMCH-1 agonists, useful for increasing appetite/weight.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MNPFHASCWNISAELLNKSWNKEFAYQTASVVDTVILPSMIGIICSTGLVGNILIVFTII

The invention is useful for preventing, treating, or amaliorating a medical condition related to the brain, lung, colon, testes, neural, gastrointestinal, pulmonary, or reproductive system. Detecting mutations in HGPRBMY9 but of expression of HGPRBMY9 is useful in diagnosing disease. HGPRBMY9 nucleic acid, polypeptide and agents that control the level of expression or activity of HGPRBMY9 may be useful in treating conditions such as cancer, Alzheimer's disease, asthma, and diabetes. The present sequence is human HGPRBMY9 protein

Human G protein-coupled receptor SLT/MCH2 protein SEQ ID NO:666.

Alzheimer's disease, atherosclerosis, infection; osteoarthritis; allergy, osteoporosis, cardiomyopathy; inflammation, Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis, anxiety; depression; schizohrenia; dementia; memory loss; mental retardation; epilepsy; asthat, tuberculosis; obesity, nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; G protein-coupled receptor, GPCR, antigenic peptide, gene therapy; of protein-coupled receptor modulator, antibody, immune-related disease, growth-related disease; cell regeneration-related disease; LDS; cancer; immunological-related cell proliferative disease; autoimmune disease; 

```
The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acid secribed: (1) am assay for the detection of a particular G cadds. Also described: (1) am assay for the detection of a particular G complex cand (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in Gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing the GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, immunological-related diseases, call giseases, or autoimmune diseases, immunological-related diseases, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoarchitis, osteoarchis, cancer, cardiomyopathy, chronic and acute disease, parkinson's disease, multiple solerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory ancer; cannon control 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABR91675 to ABP82018, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RSRKKTVPDIYICNLAVADLVHIVGMPFLIHQWARGGEWVFGGPLCTIITSLDTCNQFAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121 SAIMTVMSVDRYFALVQPFRLTRWRTRYKTIRINLGLWAASFILALPVWVYSKVIKFKDG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 6, Ap

G protein coupled receptor protein SLT, DNA encoding it and antibodies recognizing it, useful for treatment and diagnosis of e.g. neurological This invention relates to a G-protein coupled receptor protein, SLT of human origin. The nucleotide and protein sequences are given in the specification. The invention includes expression vector containing SLT encoding polynucleotide sequences, host cells transformed with the vectors, and methods for preparing SLT through the culturing of the transformants. Also included are anti-SLT antibodies, SLT ligands and Human G-protein coupled receptor SLT encoding DNA sequence. The present sequence encodes a human G-protein coupled receptor, designated HG67 or MCH-R2. HG67 is a melanin concentrating hormone receptor. Modulators of HG67 can be used to treat a patient, particularly to reduce weight, particularly in obesity, or to treat stress. These modulators can also be used to treat cancer, reduce pain, treat sexual dystunction or to produce weight gain. Bringing about weight loss can be used to reduce the likelihood of hypertension, diabetes, dyslipidemia, cardiovascular disease, gall stones, osteoarthritis or certain forms of

```
The invention relates to a novel protein comprising a fully defined 340 amino acid sequence, or the sequence contenting one or more amino acid substitutions, deletions or insertions. The protein shows melanin concentrating hormone (MCH) receptor activity. It is a G protein coupled receptor that binds to MCH. The protein is used to find agents to treat obesity, cachexia, anorexia nervosa and hyperphagia. The present sequence encodes the protein of the invention
